SIDDHANT SINGH

Aspiring Product Manager | AI & Enterprise Infrastructure | NextLeap PM Fellow

+91 79052 49718 | siddhant.singh131@outlook.com | linkedin.com/in/siddhant singh-3b58681a7 | Lucknow / Bengaluru, India

Product minded engineer transitioning into Product Management, with 3+ years of enterprise scale experience at Dell Technologies and a Product Management Fellowship at NextLeap. Proven track record of identifying high impact user problems, translating them into scalable solutions, and shipping internal products including an AI powered "Next Best Action" tool, a support automation chatbot, and a RAG based fintech chatbot deployed on Vercel. Strong technical foundation in distributed systems, AI/ML tooling, and data analysis, combined with direct enterprise customer empathy from managing 1,000+ production escalations. Actively targeting APM / PM roles in AI native products, developer tooling, and B2B SaaS.

CORE COMPETENCIES

Product: Product Strategy, Roadmap Planning, User Research (Surveys & Interviews), PRD Writing, KPI/OKR Definition, A/B Testing, Feature Prioritization

Technical: Python, SQL, Bash, Linux, REST APIs, Docker, RAG Systems, ChromaDB, FastAPI, Streamlit

Infrastructure: Dell EMC PowerScale/Isilon, NAS/SAN, Distributed Storage, SyncIQ, Cluster Operations

Data & Analytics: Root Cause Analysis, Log Analysis, Performance Metrics, Pattern Detection, Signal Extraction

Collaboration: Cross functional Stakeholder Management, Enterprise Customer Communication, Agile Workflows

PROFESSIONAL EXPERIENCE

Technical Support Engineer II (Promoted) | Dell Technologies *Jan 2022 – Present | Bengaluru, India*

- Owned end to end resolution of 1,000+ enterprise production incidents (S1/S2), acting as the customer facing product owner of the resolution experience identifying root causes, defining fix strategies, and driving cross functional solutions with engineering teams.
- Identified a critical gap in pre failover workflows: engineers had no standardized health check before high stakes SyncIQ Failover/Failback operations. Designed and shipped a 7 section automated precheck tool covering cluster capacity, policy health, mirror associations, and error extraction reducing pre failover diagnostic time and eliminating manual checklist blind spots.
- Led development of an internal AI powered "Next Best Action" tool defined the problem, scoped logic pathways, evaluated output relevance vs. resolution success, and collaborated with engineering to ship a working prototype that improved support decision accuracy.
- Built and deployed an internal support chatbot to automate repetitive diagnostic workflows designed troubleshooting decision flows, defined evaluation checkpoints, and reduced repetitive diagnostic load on the support team.
- Developed automation scripts (Python + Bash) that reduced recurring incident volume by ~15% and improved Mean Time to Resolve (MTTR) directly improving customer SLA compliance.
- Built an SSL certificate automation solution, eliminating 15–30 minutes of manual resolution time per incident estimated 200+ engineer hours saved annually.
- Analyzed customer issue trends and system behavior patterns across 500+ escalations to identify systemic failure modes, translating insights into product improvement recommendations and workflow optimizations.
- Mentored junior engineers on Linux administration, storage troubleshooting, and structured debugging demonstrating leadership and cross functional collaboration.

PRODUCT & AI PROJECTS

RAG Based Mutual Fund FAQ Chatbot *Python · Gemini 2.5 Flash · ChromaDB · FastAPI · Streamlit · Deployed on Vercel*

- Identified the problem: investors using Groww had no reliable, citation backed way to get factual mutual fund information leading to over reliance on advisors or misinformation.
- Designed and built an end to end 13 phase RAG system: async web scraping of SEBI, AMFI, and AMC fact sheets → 400 token semantic chunking → 3072 dimensional vector embeddings → Top 5 cosine similarity retrieval → Gemini 2.5 Flash generation at temperature=0.0 for factual accuracy.
- Built a dual layer guardrail system (regex + LLM intent classification) that blocks advisory questions and redirects users to SEBI/AMFI resources a deliberate product decision to manage regulatory risk.
- Includes an evaluation framework (10 strict factual/advisory test cases) measuring output quality demonstrating a "measure before you ship" product mindset.

Recoverable Voice Input for ChatGPT *NextLeap PM Fellowship · Product Case Study*

- Conducted primary user research (45 survey respondents + 6 interviews, mobile first users aged 18–25 in India) to diagnose why ChatGPT voice was underused for high stakes tasks.
- Identified the root cause as perceived irreversibility not unfamiliarity with voice and proposed "Voice as Draft": spoken input stored in a temporary state with a 2–3 second idle window for edits before AI responds.
- Defined a full KPI tree: P0 metrics (% voice usage for high stakes tasks, avg. voice turns/session), P1 metrics (transcript edit rate, abandonment rate), and guardrails (text usage delta, latency).
- Explicitly rejected obvious solutions (ASR improvements, promotional nudges) and designed a lightweight, reversible, behavior led feature requiring zero changes to existing language models.

PowerScale SyncIQ Failover Precheck Tool *Python · OneFS CLI · Internal Dell Tool*

- Built a 7 section automated health check script for PowerScale clusters designed to give engineers a clear GO/NO GO signal before high risk Failover/Failback operations.
- Made deliberate product tradeoffs: removed an unreliable `mirror_state` check (false signals in Failover are worse than no signal), used single line PASS output for multi node checks to prevent output flooding on 100 node clusters.
- Fixed 10 production bugs iteratively post v1 demonstrating ship → measure → iterate PM mindset.

Self Hosted Infrastructure Lab *Linux (Fedora) · Docker · Nextcloud · Tailscale*

- Built a containerized microservices environment with automated backups, snapshot recovery, and secure remote access used for production like workload testing and reliability experimentation.

EDUCATION & CERTIFICATIONS

Product Management Fellowship | **NextLeap** *Jan 2026 – Present | Remote*

- Completed end to end PM projects: user research, PRD writing, KPI framework definition, solution design, and experimentation planning across AI and consumer product domains.

B.Tech Civil Engineering | **Amity University Lucknow** *2017 – 2021 | Lucknow, India*

- Developed strong analytical and systems thinking foundation. Pivoted into tech through self driven learning and professional experience.

Certifications: ISM V5 · Business Analysis Foundations · Generative AI Foundations · MySQL Bootcamp

RECOGNITION & AWARDS

🏆 **Game Changer Award** (Highest Quarterly Recognition, Dell Technologies) | **Bravo Award (Top 3%)** | **Applause Award (2×)** | **Promoted to TSE II** | Shri Baljit Shastri Award
