Siddhant Singh

Technical Support Engineer II, Dell Technologies | Building AI tools for enterprise support

Bengaluru, India | +91 79052 49718 | siddhant.singh131@outlook.com | LinkedIn | sidmatrix.xyz | GitHub

SUMMARY

4 years at Dell Technologies inside enterprise customers' hardest problems: high-severity escalations for banking, telecom and media clients, debugged from the client and network layers down to the storage cluster. In parallel, I turn the problems that keep recurring into shipped products: an AI assistant that Dell's storage product team is now taking forward, a workflow platform a 12-person team runs every week that cut case time-to-resolve from 7 days to 3, and a precheck that became standard protocol across 1,000+ cases. NextLeap PM Fellow.

EXPERIENCE

Dell Technologies *Bengaluru*

Technical Support Engineer II, Enterprise Storage (PowerScale / OneFS) *Mar 2025 – Present*

Technical Support Engineer I *Oct 2022 – Feb 2025*

- **Enterprise customer problems, end to end:** Own Sev-1 and Sev-2 escalations for banking, telecom and media enterprises, often several live at once. Root-cause across client protocols, networks (including InfiniBand back-end) and cluster state, and turn recurring friction into defect and feature requests for engineering.
- **PowerScale AI Assistant (self-initiated, 0 to 1):** Engineers spent ~30 min per answer across 11 product guides. Scoped the MVP and built a local RAG assistant with an agent layer inside the OneFS web UI (Ollama, ChromaDB, Flask) over 5,205 passages, with citation gating and a low-confidence fallback, so no data leaves the customer's cluster. Lookup now takes under 20 seconds.
- **Pilot to product-team adoption:** Piloted with 40+ engineers at ~75% exact-answer accuracy and pitched the business case to management. Dell's storage product team is taking it forward; consulted on the MCP tool set they are building from the SDK and invited to demo improvements to engineering and write the requirements.
- **L2 Case Review Platform (discovery to launch):** Mapped how managers review cases (bucket verdicts, mandatory comments, ~10 per reviewer daily) and shipped a web platform that routes ~300 weekly cases across 7 skill queues, auto-assigns 12 L2 reviewers and shows managers per-engineer quality trends. Time-to-resolve fell from 7 days to 3.
- **Evaluation and honest scoping:** Benchmarked the routing classifier against 185 human-labelled cases (41% agreement), scoped it as a triage aid with humans in the loop, and captured reviewer corrections as labelled data for model training. Case study: sidmatrix.xyz/l2-case-study.
- **SyncIQ Failover/Failback Precheck:** Co-built a 30-point automated precheck that replaced a manual disaster-recovery checklist. Standard protocol across 1,000+ cases with zero failover incidents since; saves ~2 engineer hours and cuts resolution time ~50% per case. Dell Game Changer award.
- **Agentic automation:** Authored four production Claude skills that turn multi-step support work into reusable agent workflows; cut SSL certificate renewals from 1–2 hours to ~10 minutes across 100+ renewals a year. Mentor new hires on Admin and FS cases; formed and led the team engagement group.

PRODUCT WORK

- **NextLeap PM Fellowship capstone, FlowMind (AI workflow execution layer):** Users stall when an AI assistant hands them execution (scripts, API keys, schedulers). Validated with 20+ survey responses, G2, Capterra and Trustpilot reviews, a 17-screen journey audit and a SaaS founder and a VC. Delivered PRD, RICE, MVP scope, North Star metric, wireframes, a Lovable prototype and an 18-page handoff.
- **Teardowns and side builds:** Relay.app (workflow automation, published at sidmatrix.xyz), CRED, YONO SBI, Rapido, Snitch and Digi Yatra, covering users, business model, competitors and metrics. Lumynex, a self-healing Windows display manager taken from forum research and PRD to a shipped EXE.

SKILLS

- **Product:** Client discovery, PRDs and specs, wireframes, MVP scoping, RICE, success metrics, demos, stakeholders
- **AI and platform:** RAG (Ollama, ChromaDB), agents and MCP tools, Claude skills, LLM and classifier evals, n8n workflows
- **Tools:** Python, Bash, SQL, Flask, REST APIs, Docker, nginx, Linux, Figma

EDUCATION, CERTIFICATIONS AND AWARDS

NextLeap Product Management Fellowship *2026*

B.Tech, Civil Engineering, Amity University, Lucknow *2017 – 2021*

- **Certifications and courses:** Dell EMC Associate, ISM v5.0; AI Product Management; GenAI Foundations; MySQL Bootcamp
- **Dell awards:** 2× Game Changer (2026), Bravo (top 3%, 2025), Delight (2024), 2× Cheers, 3× Applause
